Druva + VMware AirWatch

Advanced Security with Easier Administration and Deployment

As mobile device usage continues to gain ground in today's enterprise, many IT organizations are faced with the challenge of providing secure access to corporate content, without having to worry about their data being compromised through data-leaks or permanent loss if a device is lost or stolen. Supporting the proliferation of mobile devices in the workplace as enterprises incorporate Bring Your Own Device (BYOD) policies, Druva has partnered with leading Enterprise Mobility Management (EMM) providers like AirWatch by VMware to safeguard mobile devices, applications, and sensitive corporate information.

As a result of this joint partnership, customers gain:

Rich features like secure backup, file sharing and governance on laptops, smartphones, tablets with higher security and easier deployment capabilities that the mobile workforce needs today. IT organizations truly get a complete end-to-end solution that empowers the mobile workforce to be productive while solving the challenge of secure access to corporate content simultaneously.

Enabled by Druva inSync – Secure Backup, File Sharing, Centralized Data Governance

- Seamless data back-up across endpoints and cloud apps
- Automated compliance management powered (e.g. HIPAA, GLBA, PHI, PII or PCI related) to monitor for potential data risks
- Integrated legal hold workflow and eDiscovery connectivity
- Tamper-proof Audit trails for providing full data and user tracking for investigation and compliance audits
- Federated search to quickly locate files across endpoints and cloud apps
- IT Managed file access and sharing for secure collaboration

Enabled by AirWatch – Higher Security and Easier Deployment

- Provisioning inSync on smartphones and tablets
- Provide auto-configuration of service URL
- PIN enforcement and encryption of data
- Enable/Disable copy, paste & print functionality
- Restrict open-in with whitelisting functionality to other apps
- Selectively remote wipe and de-provision the inSync app
