

A COMPREHENSIVE APPROACH FOR MANAGING EDISCOVERY OF END-USER DATA

The Challenge

The rise of the global workforce and the proliferation of laptops, mobile devices, and cloud applications like Office 365 have resulted in significant amounts of business data being no longer visible or accessible by IT—a costly and time-consuming burden when organizations need to identify, collect, and preserve content for the eDiscovery process.

For the eDiscovery process, end-user data at the mobile edge is a challenge because of the following factors:

- Data is distributed across multiple locations, often outside the firewall and out of IT reach.
- eDiscovery on endpoints and cloud applications is resource-intensive, which impacts user productivity.
- Collection is a reactive process, utilized at the time of pending litigation.

The Solution

Druva and AccessData enable organizations to address these eDiscovery challenges by streamlining collection and preservation efforts and easing the handoff for quick processing and analysis.

Druva inSync features the unique ability to be remotely and transparently deployed across cloud applications as well as company and employee-owned devices. The result is a centralized record of all end-user data, shared files, and associated audit trails that are accessible through federated search. Organizations can search across custodians, data, and devices; place legal holds, and preserve relevant data in place without the need to export it to an intermediary server. No other end-user data backup platform offers this combination of proactive collection and automated preservation capabilities, which are critical for expediting early data analysis and ensuring data integrity.

AccessData eDiscovery brings IT and legal teams together like never before, in a single, fully integrated platform for enterprise-wide search, collection, systemized preservation or legal hold, processing, data assessment, and complete legal review. Suitable for technical and nontechnical staff alike, AccessData eDiscovery merges the intuitive litigation-hold features, robust processing capabilities, and the rich early case-assessment workflow with advanced legal-review features. This creates the only complete response to any matter, from initial risk analysis through preservation and tracking, multisource collection, scalable distributed processing, and comprehensive legal review.

Business Challenge

- Lack of complete visibility for data on endpoints and cloud applications
- Resource and time constraints because eDiscovery on endpoints and cloud applications is resource-intensive
- Reactive and often ineffective data collection when utilized at the time of pending litigation

Integration Benefits

- Collect disparate end-user data across devices and cloud applications
- Manage legal holds and eDiscovery automatically and consistently
- Preserve data in-place without requiring intermediary storage

Requirements

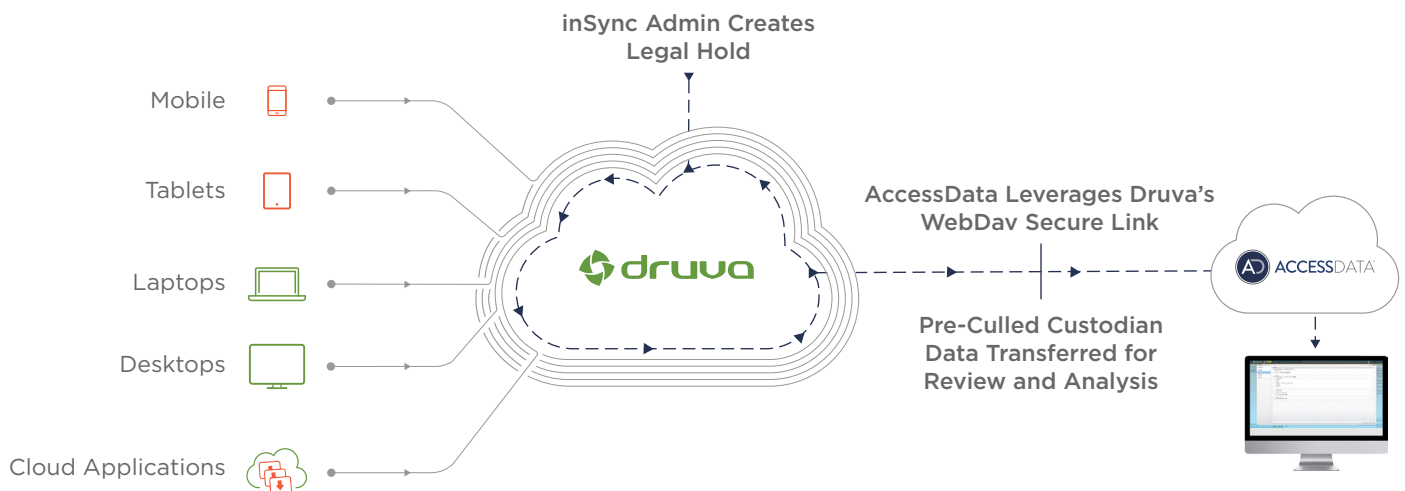

- Druva inSync
- AccessData ResolutionOne

The joint integration provides the following features:

- The ability to capture a wider range of Electronically Stored Information (ESI), including cloud-application and mobile-device data
- Easy, direct handoff from the Druva inSync platform to the AccessData eDiscovery solution
- Proactive collection of time-based end-user data (backup), which means more complete ESI for eDiscovery purposes

How It Works

The integration between Druva inSync and AccessData eDiscovery works as follows:

The Benefits

The joint solution between Druva and AccessData delivers the following benefits:

- It addresses the challenge of collecting disparate data across endpoint devices and cloud applications.
- It manages legal holds with a systematic, easy-to-use workflow.
- It preserves data in place without requiring intermediary storage.
- It utilizes a one-step handoff between held data and eDiscovery systems.

About Druva

Druva is the leader in cloud data protection and information management, leveraging the public cloud to offer a single pane of glass to protect, preserve and discover information —dramatically increasing the availability and visibility of business critical information, while reducing the risk, cost and complexity of managing and protecting it.

Druva's award-winning solutions intelligently collect data, and unify backup, disaster recovery, archival and governance capabilities onto a single, optimized data set. As the industry's fastest growing data protection provider, Druva is trusted by over 4,000 global organizations and protects over 25 PB of data. Learn more at www.druva.com and join the conversation at twitter.com/druvainc.

About AccessData

Whether it's for investigation, litigation or compliance, AccessData® offers industry-leading solutions that put the power of forensics in your hands. For 30 years, AccessData has worked with more than 130,000 customers in law enforcement, government agencies, corporations and law firms around the world, providing both stand-alone and enterprise-class solutions that can synergistically work together. The company is backed by Sorenson Capital, a leading private equity firm focused on high-growth portfolios. For more information on AccessData, please go to www.accessdata.com.
