

Data Protection and Information Management for Cloud Applications

Druva inSync Provides a Single Pane of Glass for Managing Data across Box, Google Suite, Office 365 and Salesforce

Today's increasingly mobile enterprise has resulted in a loss of data control. Data on laptops and smartphones as well as within cloud applications, like Microsoft Office (One Drive and Exchange Online), Google Suite (Google Drive, Google Docs and Gmail), Box and Salesforce, translate to increased risk of company data loss and the inability to track, hold or monitor data for regulatory compliance and legal obligations. Druva, with its endpoint and cloud app integration, enables enterprises to regain control and address these challenges by providing a centralized system for the management, governance and recovery of user data - no matter where the data resides.

Easy Cloud-to-Cloud Connectivity

inSync leverages popular SaaS service APIs to connect directly with Office 365, Google Suite, Box and Salesforce. Admins simply connect to their cloud application service via the inSync administration panel and inSync starts collecting and scanning data by user.

Centralized Visibility Over Dispersed Data

With inSync, enterprises have a single access point for viewing and managing end-user data without having to scour across multiple disjointed systems to find it. By centralizing cloud application and endpoint user data and adding capabilities for richer data insights, inSync aids in adhering to corporate data policies and regulatory compliance requirements. These capabilities include:

- **Federated search** enables administrators to locate any file across all users, devices and cloud applications.

- **Tamper-proof user and admin audit trails** provide transparency, traceability and accountability into all activities in the organization for compliance initiatives
- **Automated compliance management** powered by full text search capabilities and built-in compliance templates (e.g. HIPAA, GLBA, PHI / PII related) to monitor for potential data risks and easily meet data regulations

Simplifying eDiscovery for Cloud Application Data

inSync is the first integrated solution that non-intrusively collects dispersed enterprise data wherever it resides - endpoints and cloud applications. inSync merges all data sources, provides a single dashboard for managing legal holds and simplifies the eDiscovery process.

- **Investigative access** enables IT and legal teams to locate, view, preserve and collect data without impacting custodians
- **Built-in legal hold workflow** facilitates the collection and preservation of relevant custodian data for legal teams
- **Secure file system access** enables ingestion into an eDiscovery platform directly from the inSync repository for further review by legal teams
- **Forensic based collection and chain of custody** reporting to ensure legal admissibility and remove the risk of spoliation

One Step Archiving of User Data

Managing data across multiple data sources means that holding and storing data for long term archiving becomes more complex for IT, as each system has its unique nuances. inSync enables the organization to centralize the data across sources, by user, and retain it for as long as necessary.

- **Retain all user data for as long as necessary** to meet corporate governance obligations
- **Search historically across data and audit trails** to identify data necessary for compliance responses
- **Protect data from accidentally being purged** by ensuring it's preserved even after employees depart

Druva is the leader in cloud data protection and information management, leveraging the public cloud to offer a single pane of glass to protect, preserve and discover information - dramatically increasing the availability and visibility of business critical information, while reducing the risk, cost and complexity of managing and protecting it.

Druva's award-winning solutions intelligently collect data, and unify backup, disaster recovery, archival and governance capabilities onto a single, optimized data set. As the industry's fastest growing data protection provider, Druva is trusted by over 4,000 global organizations and protects over 25 PB of data.
